

CLINICAL WASTE

Nitrogenx offers you a complete range of clinical waste bags and bins in a variety of sizes to suit every environment. Clinical waste bags and bins are easily identifiable to ensure effective waste segregation of clinical waste from other waste products. Clinical waste bins are made of puncture proof plastics and some have the option of stands, wheels and foot-pedal opening mechanisms resulting in a dramatic reduction of infection transfer risk. Locks and chains can be fitted for outside storage. Nitrogenx offers a door-to-door delivery and collection service for all of your clinical waste requirements.
