

Unite
against
COVID-19

As we all move through the Levels of 4, 3, 2 and 1 Nitrogenx has continued supporting our customers by adjusting to meet the new needs of our communities. It has also meant as practices changed to virtual consultations, Nitrogenx did to. While many of our customers such as Dental, Education etc have been in lock down, Nitrogenx has had to Pivot (the new buzz word) to ensure we continue providing the essential Health Care Support Services across all our regions.

This has included working closely with DHB's and PHO's as they implement Community Based Assessment Centres (CBAC). Nitrogenx implemented and supported CBAC centres around the Auckland, Waikato and BOP region providing them Medical Waste Foot Pedal Bins and our Medical Waste Disposal service to ensure the safe, collection and disposal of PPE gear to the New Zealand Healthcare Standards.

Contact tracing of suppliers is now a standard pre-requisite and Nitrogenx has had this in place electronically for many years so rest assured we have this covered should you need it.

We are in a phase of change and with that comes opportunity.

Our business model supports the future needs of practices to reduce the number of suppliers on site and consolidate servicing. We have been doing this for years providing a one-stop-shop for medical supply services. We are now looking to implement the supply of NOS and Entonox along with our Medical Oxygen and Liquid Nitrogen gases. We have adapted and moved to offering foot pedal bins for our customers as well. You will have seen we can now also provide face masks and hand sanitizers. The beauty of Just-In-Time servicing is that we hold the stock for you so you can have a regular monthly order of stock so you don't have to stock pile thus impacting your much needed cash flow.

Talk with us and share how your needs may be changing so we can support you. Visit www.nitrogenx.co.nz or call us on **0800 22 33 85**
